AMENDMENTS TO THE CLAIMS:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-7 are canceled.

- 8. (New) Microfluidic device comprising at least one microchannel designed to contain at least one liquid and at least one fluid non-miscible with the liquid and means for stabilizing the interface between the liquid and the fluid, said microchannel being bounded by a bottom wall, side walls and a top wall, microfluidic device wherein the means for stabilizing comprise at least one electrode arranged on at least one part of a first wall of the microchannel, over the entire length thereof, and at least one counter-electrode arranged over the entire length of the microchannel, on at least one part of a second wall arranged facing the electrode.
- 9. (New) Microfluidic device according to claim 8, wherein the counter-electrode is arranged on the whole of the second wall.
- 10. (New) Microfluidic device according to claim 8, wherein the electrode and counterelectrode are respectively arranged on the bottom and top wall.
- 11. (New) Microfluidic device according to claim 8, wherein the electrode and counterelectrode are respectively arranged on the side walls.

- 12. (New) Microfluidic device according to claim 8, wherein the fluid or liquid being electrically conducting, the microfluidic device comprises insulating means arranged between the electrode or counter-electrode and said fluid or said liquid.
- 13. (New) Microfluidic device according to claim 8, wherein the fluid flows in the microchannel in an opposite direction to that of the liquid
- 14. (New) Microfluidic device according to claim 8, wherein the microchannel comprises, at least at one end, two end microchannels designed for the fluid and the liquid to respectively flow therethrough.
